

Team Name:

- project-2-brian-michael-s-team

Team Members:

- Brian Kruse
- Michael Baylard

Task Distribution:

- Both worked together on code and logic of program
- Both added to report and scripts of project

Challenges Encountered:

- Figuring out how to send the messages in bytes and decode them
- Figuring out how to send the message back to the client from the server
- Recv() function was giving us a hard time

How we tackled the challenges:

- Found the functions "sendall()", "send()", "encode()", and "decode()" online and their properties/how they are used
- Gave the recv() function a timeout, so that it was not sitting on it infinitely

Resources used to do the project/solve the problems:

- Stackoverflow
- Pythontic.com
- python-reference.readthedocs.io

Lessons learned from this project:

- Start as early as you can
- Problems you have never encountered will inevitably show up

How to improve the project:

- Go over the needed functions in depth
- Go over the process as many times as possible
